

HOUSE FINCH AT REGINA, SASKATCHEWAN

The following notes were taken on House Finch observations in Regina, Saskatchewan.

Date: 23 April 1990

Place: Back yard feeder, 40 Richardson Crescent, Regina, Saskatchewan

Time: 10:30 a.m.

Description: Small bird, size of sparrow, slightly slimmer, brownish in color, naked breast. No markings on head. Thick bill.

Feeding habits: Fed on sunflower seeds rather than bird seed. Never seen on ground. Always at feeder or in tree, not intimidated by sparrows.

sightings: 23 April 1990, 10:30 a.m., 5:30 p.m. 24 April 1990, 7:30 a.m. Not seen again.

Photos (slides): Ektachrome 200 lens on 70-230. Photo taken at 230 at a distance of about 12 feet.
