

60th ANNUAL SASKATCHEWAN CHRISTMAS BIRD COUNT – 2001

Wayne C. Harris, Saskatchewan Environment and Resource Management, Box 5000,
350 Cheadle Street West, Swift Current SK S9H 4G3

This, the 60th year of annual Christmas Bird Counts in Saskatchewan, marks a number of milestones. First, recognition to two longtime contributors to Christmas Bird Counts, Stuart Houston and Frank Roy. A check of the 1942 counts published in the Blue Jay finds both names present, as they have been almost every year since. It is an amazing record and contribution both have made to ornithology in Saskatchewan.

Secondly, the growing interest in Christmas Bird Counts from the eight counts in 1942 to a record 105 counts this year.

Thirdly, the increasing diversity of wintering birds in Saskatchewan. The last is a result of increased habitat modifications (open water), and the increasing popularity of feeding birds. Those first counts recorded 30 species of birds, while this year the total was 113, the second highest ever. Also, 14 of this year's counts equalled or exceeded 1942's total of 30 species for the Christmas Count that year.

The weather leading up to this year's count period (December 14 to January 5) was mild and dry. The mild conditions continued through the counts, with the overall average daytime high at -8°C and falling to only -13°C overnight (Table 1). It was relatively calm, with winds averaging 5 – 15 km/hr. Most southwestern counts had no snow on the ground. Snow cover was below normal everywhere, but especially in the western half of the province.

Record numbers of participants turned out for this year's count. There were 912 people compared to last year's 804. They travelled over 803 km on foot and over 14,084 by vehicle in a combined 1065 hours; an additional 414 hours were spent watching feeders (Table 2).

The birds

This year, 108 species were seen on count day with an additional five seen during count period for a total of 113 (second only to 1998's 121 species). Fort Walsh set a new single count species high with 51 seen on count day. This is the first Saskatchewan count to break the "50 species" mark. Both Fort Qu'appelle (43) and Saskatoon (40) were in the "40's" and an additional 11 counts reached 30 or more. This is far above the average for species diversity on counts.

The abundance of birds was also up, with more than 171,000 individuals recorded. This was almost double last year's total. Surprisingly, the most abundant bird was Canada Goose (36,515), followed by Mallard (26,781), and then Snow Bunting (25,234), House Sparrow (24,087), and Common Redpoll (16,651). The dominance of waterfowl is a further indicator of the mild open conditions experienced this year.

The most frequently encountered species was Common Redpoll (93% of counts), followed by Black-billed Magpie (91%), Black-capped Chickadee (85%), House Sparrow (81%), and Common Raven (75%). Ravens continue to climb the occurrence

scale as they expand across the southern parts of the province.

New species

After having no new species on last year's counts, this year there were five, bringing the all time total to 177. The first was a Red-bellied Woodpecker in Regina. This bird had been present throughout the fall and remained through the Christmas Count. Next was a Gray Catbird visiting feeders in northwest Moose Jaw. A Swamp Sparrow was found along Eagle Creek by Wayne Renaud on the Harris count.

The last two new species were seen during the count period, but not on count day. A Long-billed Curlew was found on the snow-free grasslands northwest of Maple Creek on December 14, and a Clay-colored Sparrow was seen at a feeder on December 24 on the La Ronge North count.

Rarities

A number of rare species were present on this year's count. Most notable was a Pied-billed Grebe at Crooked Lake, only the third count record, as was the Great Blue Heron at Fort Walsh, and the Greater Scaup at Gardiner Dam. Ring-necked Ducks had only been found twice in the past, but this year both Estevan and Saskatoon had them. There were two Belted Kingfishers at Fort Walsh, a third count record. A Swainson's Hawk at Indian Head was only the second record.

Population trends

A number of species were found in record high numbers on the count (Table 6). The most notable of these was 30,700 Canada Geese at Coronach, 984 Black-billed Magpies at Saskatoon, 62 Purple Finches at Swift Current, and 386 House Finches at Saskatoon.

Table 7 shows population trends for a number of regularly occurring species. In general, all water related species were above normal. The largest increase was for Canada Goose, but this was influenced by one very

large count and the number of counts reporting them was actually fewer than the last big year – 1998.

Both Golden Eagle and Prairie Falcon numbers were up. Grouse were down, with both Ring-necked Pheasant and Gray Partridge down appreciably. This being the result of last year's severe winter in eastern Saskatchewan. Both Ruffled Grouse and Spruce Grouse remained low in numbers.

Both Great Horned and Snowy owl numbers were up while boreal forest owls were very scarce after last year's irruption. Short-eared Owls were down, suggesting low vole numbers, as there was little snow cover to force them south.

Nuthatches, Creepers, and Kinglets were present in well above normal numbers and winter finches had a very good year, particularly the redpolls and crossbills.

Additional counts

The following counts were received too late to be included in the tables. "O" denotes species seen during the count period, but not on the count day.

104. Fife Lake

Dec 29. Temp -15 to -12°C. Wind 20 to 30 km/hr. No snow cover. Sky mostly clear. 100km by car in 5hrs. Canada Goose 13, 253; Mallard 2; Common Goldeneye 2; Bufflehead 3; Bald Eagle 2; Northern Harrier 1; Golden Eagle 1; Merlin 1; Prairie Falcon 1; Gray Partridge 10; Horned Lark 383; Black-billed Magpie 1; House Sparrow 96; 13 species, 13,756 individuals. *Martin Myers, Robert Rafuse.*

105. Rockglen

Dec 28. Temp -1 to +3°C. Wind 10 to 20 km/hr. Snow less than 5cm. Sky clear. 2km on foot in 1hr, 150 km by car in 4 hours. Northern Goshawk 1; Golden Eagle 1; Merlin O; Gyrfalcon 1; Prairie Falcon O; Gray Partridge 11; Ring-necked Pheasant O; Sharp-tailed Grouse 78; Great Horned Owl 1; Short-

eared Owl 1; Horned Lark 1550; Black-billed Magpie 3; American Robin 8; Lapland Longspur 500; Red-winged Blackbird 0; Rusty Blackbird 0; Common Redpoll 24; Pine Siskin 1; 18 species, 2249 individuals.
