DDITIONAL NOTES ON AKS IN EAST-CENTRAL ASKATCHEWAN

ONALD F. HOOPER, Box 40, omme, Saskatchewan. S0E 1N0.

On 7 April, 1981 while visiting a friend Yorkton, I mentioned about the Bur ak that we had found in our area. She en told me that a relative of theirs living ar Willowbrook had a bluff of oaks on farm. I immediately went out to teck on it.

Mike Tereschuk who lives seven iles south and one mile east of Willowook took me about one-quarter mile est of his farm buildings to a hill which the highest spot in the immediate ea. On the hill is three acres mpletely covered with native oak

trees. There are about three more trees on the fenceline one-quarter mile south of there.

Mike, who is 65, has lived on this farm all his life. His father had left the bluff, while clearing in the early days as oaks are so deeply rooted and much harder to grub out than the poplar trees. Mike would have put the oaks on the brushpile, but his wife wouldn't let him. I complimented him on sparing the trees, and told him that they were very rare in this part of the province, and should be preserved not only because they are rare trees but also a western extension to the range of many species of insects that only live in oak forest.

If any reader knows of additional native oak records for Saskatchewan, than those which have been mentioned, could you please let me know as soon as possible, so that we can check them out this summer.
