50TH ANNUAL SASKATCHEWAN CHRISTMAS MAMMAL COUNT - 2022

Alan R. Smith

Box 154 Avonlea, SK SOH OCO alanrandi@sasktel.net

Of the 83 Christmas Bird Counts conducted last winter. 79 were accompanied by a Mammal Count — an increase of six over last year. This uptick in effort was probably partly responsible for a large increase in the number of mammals seen or heard from 3.664 to 4.937.

White-tailed Deer, with 1,880 individuals, and Mule Deer, with 1,379 animals, were by far the most commonly encountered mammals.

Next came several species that numbered between 200 and 300 animals: Eastern Fox Squirrel (229), Coyote (256), Pronghorn (259), White-tailed Jackrabbit (260), and American Red Squirrel (290). Over half of the Jackrabbits and Fox Sauirrels were, however, seen on the Regina count.

On the other end of the spectrum, an extreme rarity was a Wolverine on the Nisbet Forest West Count on 26 December.

Regina had the most species seen or heard with 11, Odessa and Roscommon S.D. were the runners-up each with 10 species.

One new species, the aforementioned Wolverine, was added this past winter bringing the all-time provincial total to 52 species seen or heard (plus three species found dead and three others recorded only on the basis of tracks).

For information on participants, weather, coverage and location of Christmas Mammal Counts, see the Christmas Bird Count summary in this

Explanation of entries in Table 1

The number of mammals actually seen or heard on count day is treated separately from those recorded by other means, or those recorded during count period (14 December to 5 January) but not on count day. Numbers of individuals seen or heard are given in Table 1 and are tallied in the first line of totals at the bottom of the table. The number of species they represent is given in the second line.

For species only detected by tracks or by other means, or that are seen or heard only in the count period but not on count day, no numbers of individuals is given in Table 1. Species detected only by tracks are indicated by 't' in the table; those detected only by other means — dead animals 'm', more clearly identifiable chewing or digging 'd', dens or lodges 'L' (including Muskrat push-ups) and by smell 's.' Species detected by any means during the count period, but not on count day, are indicated by 'c' in the table. These additional species are tallied in lines 3. 4 and 5 at the bottom of the table. If a mammal is reported as member of a species group (i.e. mouse species, deer species), it is counted as a species only if no other species in this group has been definitely recorded. The columns at the end of the table, give totals for each species.
